

The way we educate ourselves is going to change soon. Learning is already becoming a life-long process. So, the number of learners and the need for online learning support resources are only going to increase.

However, the challenges are plenty, right from providing the best infrastructure to actually ensuring that the infrastructure is secure and sustainable.

Putting our main emphasis on security; allow me to take you back to 2021 at one of Uganda's most prestigious institutions; Kyambogo University where over 50 students missed out on graduation simply because of missing marks. Well, sources say the system was tampered with during the lockdown period and some students were compromised due to unhealthy relationships with lecturers.

Now we are looking at 50 students, that makes 100 parents,.. And maybe over 200 siblings and thousands of relatives whose hope relied on the success of these students but was tarnished.

This doesn't only happen at Kyambogo. It is in all Universities.. Makerere.. Mbarara.. Lira etc

THIS IS WHERE our system APA(Academic Personal Assistant) comes in.
